

BPL (PLC) will destroy the world wide communication HF bands for Amatuer Radio operators and Short wave listeners for that matter and either needs to be NOT used as a medium for the internet connections or the interference it will cause needs to be eliminated BEFORE operation begins. BPL, being a Part 15 service, would have to take a backseat to a licensed service such as Amateur Radio. If BPL is interfering with a Ham station, It should generate an immediate letter of enforcment from the FCC, such as dirty Power line transformers do. However, If the Ham's 1.5 KW gives the BPL user interference, Just show them the Part 15 label of acceptance of interference by a part 15 device. Power line companies already have to take care of interference to the Amatuer service frequencies now. This should raise immediate problems for this type of transmission.

Please do not do it or fix it BEFORE you start.
